Art Unit: 2627

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Tsukihashi (USP-6,584,053).

Tsukihashi discloses a data recording controller for recording data to a disc medium to which a disc address corresponding to a predetermined data format is recorded beforehand in compliance with the data format, together with a data address and recording additional data from an end of data that has already been written. See abstract. A detection circuit detects a difference between the data address and the disc address obtained by reading the written data. A timing control circuit determines a timing for initiating the recording of the additional data based on the difference. See col. 6, line 26, through col. 7, line 25.

Claims 2-4 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 5-14 are allowed.
